# Preserving, Managing and Enhancing Natural Resources

## Forest Development and Management

**Forest Management Plan (Natural Forests and Plantations)**

**Forest Inventories**

**Reduced-Impact Logging (RIL)**

**Traceability and Chain of Custody**

**Forest Management Certification (FSC, PEFC, legality verification)**

**High Conservation Value Forests (HCVF)**

**Forest Biodiversity Assessments**

## Environmental Expertise

**Environmental Impact Assessments**

**Environmental Diagnosis and Audits**

**Environmental Management Plan (EMP)**

**Wildlife Management**

**Eco-Management**

**Preparation for accreditation ISO 14 001**

**Carbone and Climate Change (CDM, REDD+)**

## Institutional support and project management

**Feasibility studies**

**Project assessment and project development**

**Funding**

**Institutional Assessment**

**Sustainable Development**

## Tools and Training

**Consultancy**

**Technical assistance**

**Training**

**Socio-economic studies**

**Digital cartography (GIS) Geographic System Information**

**TEREA** is a professional environmental consulting company specialized in environment and sustainable management of natural resources. We work in close cooperation with government departments of forestry and environment administrations, as well as with the private sector and funding agencies.

TEREA's areas of work encompass a wide variety of sustainable development and climate change-related issues. We successfully conduct our activities by relying on our team of environmental resource professionals including environmental experts and engineers specialized in forestry, biochemistry, socio-economics, and Geographic Information Systems (GIS). In addition to its internal skills, TERE A, through its extensive network of national and international experts, combines resources across geographic boundaries and technical and scientific disciplines to provide its clients with the best response teams to tackle their needs and concerns.

With offices in France and Gabon as well as representation in Argentina and the Democratic Republic of Congo, TERE A has a strategic and global geographical position that allows for prompt intervention at an international level.

TEREA works with various industries such as oil, mining and forest, to perform Environmental Impact Assessment studies, provide environmental expertise, conduct ecological inventories and offer environmental management services.

With its established expertise in natural forest and plantation management, TERE A is currently involved in the sustainable management of more than 8,000,000 hectares of forest in Central Africa. We also, through our experienced auditors, assist logging companies and other forest-base industries in being awarded environmental accreditation as well as forestry and chain custody certifications.
